ABOUT TAC

The AI Congress (TAC) is a departmental committee formed to foster collaborative learning, enhance skills, and provide industry exposure. As the backbone of our department's future, TAC consists of three core wings: Technical, Non-Technical, and Social, all working together to achieve its mission.

Following a campaign, TAC conducted systematic, well-documented elections using a ballot-box system to select wing leads. The committee's inaugural event was held on October 6, 2025, in the presence of Dr. T.S. Arun, Managing Director at Accenture, and Principal Dr. M. Muthukannan.

The Technical Wing bridges the gap between industry challenges and student innovation. It sources real-time problem statements from startups and connects students to both monetized and non-monetized project opportunities. Through hackathons, workshops, contests, certifications, and interactive sessions, it promotes critical thinking and hands-on skills. Notably, the wing delivered an interactive talk titled "Think as a Data Scientist" and has upcoming workshops on data science tools. The Non-Technical Wing focuses on team building and skill-based solutions for industries.

It hosts seminars, webinars, and events to nurture entrepreneurial spirit and soft skills. The wing also supports extracurricular development and talent showcasing. TAC's official logo was a product of a student-led logo design competition organized by this wing.

The Social Wing manages promotion and branding through marketing and outreach. It engages in activities like beach cleaning and tree planting, while also handling social media for the department and TAC. Future initiatives include orphanage visits and raising awareness on social issues, especially in coastal areas.
